Response to Amendment

Claims 1-15 are currently pending in the application. Claims 1-15 remain rejected under 35 U.S.C. 102(e) and such rejection is herein made final.

Claim Objections

The previous objections to claims 2, 11 and 12 has been overcome with the clarification of the meaning of "TCP/IP" and as such the objections are withdrawn.

Claim Rejections - 35 USC § 102

Claims 1-15 remain rejected under 35 U.S.C. 102(e) as being anticipated by the Usher et al. publication (US 2001/0044771 A1) and are herein made final.

The Usher publication discloses a system for providing real time data transmission comprising:

A data network (Fig. 1A), a data provider (120), a client terminal (200), and a server terminal (115) (See page 5, paragraph 0058) (claim 1);

The server terminal, client terminal and data terminal are each connected to a data network under TCP/IP protocol (TCP/IP protocol, page 5, paragraph 0059)(claim 2);

The client terminal includes one of a personal computer, a wireless application protocol enabled mobile telephone, an internet access enabled personal digital assistant, and a laptop computer (combined phone and PDA, PDA, and portable computer, page 5, paragraph 0058)(claim 3);

Application/Control Number: 09/967,076

Art Unit: 3624

The real time data includes one of a real time price information of a traded commodity, and a real time trade volume information of the traded commodity (real time auction, page 6, paragraph 0065, and swap terms, page 7, paragraph 0078)(claim 4); and

The server terminal and the client terminal are coupled to the data network under a secure environment (Secure HTTP and SSL, page 5, paragraph 0059) that includes one of a password protected or an encrypted environment (use of digital certificates, page 5, paragraph 0059)(claims 5, 6, 7 & 8).

The Usher publication also discloses a method comprising:

Establishing a connection to a data provider (page 5, paragraph 0058), establishing a connection to a client terminal (page 5, paragraph 0058), transmitting a client receiver application to the connected client terminal (page 5, paragraph 0063), and pushing information received from the connected data provider in real time to the connected client terminal (retrieving info from and providing info to, page 5, paragraph 0063)(claims 9 & 15);

Displaying the pushed information at the client terminal (display screens, page 9, paragraph 0092)(claim 10);

Establishing a TCP/IP communication protocol with the data provider (using TCP/IP protocol, page 5, paragraph 0059) and the client terminal (claims 11 & 12);

Receiving information from the connected data provider (retrieving info from and providing info to, page 5, paragraph 063)(claim 13); and

The received information includes a real time price information of a traded commodity (real time auctions, page 6, paragraph 0065, and swap terms, page 7, paragraph 0078)(claim 14).

Response to Arguments

Applicant's arguments filed 1-23-04 have been fully considered but they are not persuasive. The Applicant asserts that the server terminal in Usher is not configured to 'push the received real time data substantially immediately to the connected client terminal' (claim 1) and that Usher does not disclose a method for 'pushing information received from the connected data provider substantially in real time to the connected client terminal' (claims 9 and 15), as presently claimed. In response, it is the Examiner's position that the Usher publication discloses a system having a server terminal (application server 115) coupled to a client terminal (data network 200) (TCP/IP protocol, page 5, paragraph 0063). The Usher system also discloses that the system can operate in real time (page 6, paragraph 0065). As such, since the Usher system operates a real time auction, it does provide a system that is configured to push received real time data (claim 1). Also, as the Applicant acknowledges in their Amendment on page 5, the Usher patent discloses that "application server 115 may, for example, have one or more common gateway interface (CGI) or active Server Pate (ASP) scripts for providing information submitted to Internet and application server 115 from database server 120 to access device 200...." Since the cited structure is capable of operating a real time auction, it is the Examiner's position that the Usher publication does disclose a system that pushes information from the data provider in real time to the connected client terminal, and therefor maintains the final rejection.

Conclusion

Application/Control Number: 09/967,076 Page 5

Art Unit: 3624

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sandra Snapp whose telephone number is 703-305-6940. The examiner can normally be reached on Mon.-Thurs..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vincent Millin can be reached on 703-308-1065. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1113.
